

New Features for Generations Version 1.5.3

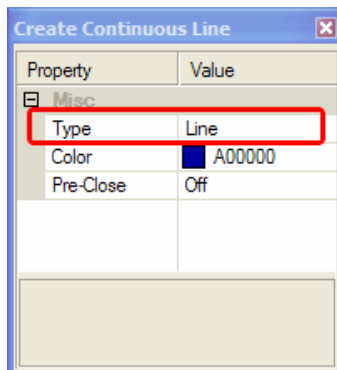

Generations Version 1.5.3 is mainly a minor update for running on the 32 bit Windows Vista Operating System. This is not a big update as far as features are concerned, but there are a few new options in the program.

1. Manual Punch Tools – New option to turn the closing line On or Off when punching. This is applicable to Freehand Line, Freehand Area, and Continuous Line. The option is shown in the properties bar when the manual punch tool is selected.

When the pre-close option is ON, there will be a preview of the design with a line showing between the first point and last point input on the shape that is being punched. With the option OFF, there is no preview of the line showing between the first and last points.

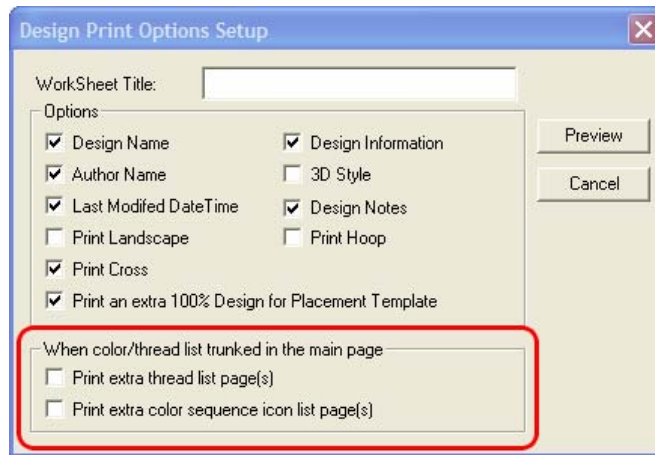

2. Continuous Line Punch Tool – There is now an option to select Line or Area for the stitch Type.

3. Grid Icon – Turns the Grid on or off when selected. This icon is on the View Toolbar.

4. Print on Multiple Sheets of Paper – Now print the design properties on multiple sheets of paper for designs. This is helpful when the design has more than 24 colors.

5. Open Other – Use this option when opening ASD or PXP files. You can find this on the File, and then scroll down to Open Other.
