

IF GENERATIONS IS CURRENTLY INSTALLED ON YOUR COMPUTER (3 STEPS)

STEP 1 – INSTALL GENERATIONS 64

Close out Generations if it is open. Load the 1.6 update CD into your computer – this CD should Auto Run. The option to run the file Gens-3884.exe will appear – click the file to run the installation. If it does not Auto Run, then open the CD's contents and click on the Orange Generations Icon for Gens-3884.exe.

A dialog box will appear for the Generations 64 setup. Please read the prompt and click OK to continue. The next dialog box will ask to continue the setup. Click Setup and the install will continue. Once you continue, you will be asked to enter in the code to continue with the installation. The code is inside the package – please make sure to enter in as it is marked. The code is case sensitive. After the code is input, the installation will continue.

If you have a previous version of Generations installed, a new dialog box will appear and ask to confirm uninstallation of this version. Click OK to continue. The uninstallation will automatically begin. If any warning message/prompt appears, click Yes/OK to continue. Once it is complete, you need to then remove the dongle (if it is not already removed).

Go back and open up Computer (My Computer) – locate the CD drive and open the contents of the folder (right click on the drive and select Open). Double click on the orange Generations 64 icon for Gens-3884.exe. Again, the dialog box will appear with a prompt – click OK and then click Setup in the Setup box to continue. In the next dialog box, enter in the code as you did before (the code inside your package).

After entering the code, the installation will continue. The first dialog screen of the installation will prompt to continue – click Next. The next box is the License Agreement. To continue the installation, you must accept the License Agreement by clicking the YES button. Clicking NO will end the installation.

Next, enter the user name & company information (if applicable) to continue. If you made an error in the user info, you can select No and go back to make corrections. Once the info is correct, click Yes to continue with the installation.

Generations will automatically select the default installation location. It is not recommended to change the location; it may make updating at a later date more difficult. Click Next to continue. Generations will display the install progress window. During this time, other windows that may be open may require a response from you.

If you receive a warning message about the Parallel Port, click OK to continue. Do Not click Cancel. Once the install is finished, click Finish and your desktop will be restored.

STEP 2 – INSTALL THE BUILDING BLOCKS

Open up Computer (My Computer) – locate the CD drive and open the contents of the folder (right click on the drive and select Open). Double click on the purple Generations icon for Blocks.exe. This will prompt the installation of the building blocks. The Building Blocks dialog box will appear – read the prompt and click OK to continue. The next box will ask you to unzip these files – click Unzip to continue. Then, after they are installed, click OK in the next dialog box (127 files unzipped successfully) – close the self-extractor.

STEP 3 – INSTALL THE MONOGRAM FRAMES

Eject the installation CD and then insert the Exclusive Monograms CD. After it is inserted, the CD should prompt an Auto Run – click to run Exclusive Monograms. If it does not Auto Run, open up Computer (My Computer) – locate the CD drive and open the contents of the folder (right click on the drive and select Open). Double click on the purple Generations icon for Exclusive-Monograms.exe. This will prompt the installation of the monogram frames. The Monogram Frames dialog box will appear – read the prompt and click OK to continue. The next box will ask you to unzip these files – click Unzip to continue. Then, after they are installed, click OK in the next dialog box (40 files unzipped successfully) – close the self-extractor.

Plug in the blue dongle – start Generations and then install the key file (emailed to you with instructions).

IF GENERATIONS IS NOT CURRENTLY INSTALLED ON YOUR COMPUTER (2 STEPS)

STEP 1 – INSTALL GENERATIONS 64

Remove the dongle if it is plugged in. Load the 1.6 update CD into your computer – this CD should Auto Run. The option to run the file Gens-3884.exe will appear – click the file to run the installation. If it does not Auto Run, then open the CD's contents and click on the Orange Generations Icon for Gens-3884.exe.

A dialog box will appear for the Generations 64 setup. Please read the prompt and click OK to continue. The next dialog box will ask to continue the setup. Click Setup and the install will continue. Once you continue, you will be asked to enter in the code to continue with the installation. The code is inside the package – please make sure to enter in as it is marked. The code is case sensitive. After the code is input, the installation will continue.

After entering the code, the installation will continue. The first dialog screen of the installation will prompt to continue – click Next. The next box is the License Agreement. To continue the installation, you must accept the License Agreement by clicking the YES button. Clicking NO will end the installation.

Next, enter the user name & company information (if applicable) to continue. If you made an error in the user info, you can select No and go back to make corrections. Once the info is correct, click Yes to continue with the installation.

Generations will automatically select the default installation location. It is not recommended to change the location; it may make updating at a later date more difficult. Click Next to continue. Generations will display the install progress window. During this time, other windows that may be open may require a response from you.

If you receive a warning message about the Parallel Port, click OK to continue. Do Not click Cancel. Once the install is finished, click Finish and your desktop will be restored.

STEP 2 – INSTALL THE BUILDING BLOCKS

Open up Computer (My Computer) – locate the CD drive and open the contents of the folder (right click on the drive and select Open). Double click on the purple Generations icon for Blocks.exe. This will prompt the installation of the building blocks. The Building Blocks dialog box will appear – read the prompt and click OK to continue. The next box will ask you to unzip these files – click Unzip to continue. Then, after they are installed, click OK in the next dialog box (127 files unzipped successfully) – close the self-extractor.

STEP 3 – INSTALL THE MONOGRAM FRAMES

Eject the installation CD and then insert the Exclusive Monograms CD. After it is inserted, the CD should prompt an Auto Run – click to run Exclusive Monograms. If it does not Auto Run, open up Computer (My Computer) – locate the CD drive and open the contents of the folder (right click on the drive and select Open). Double click on the purple Generations icon for Exclusive-Monograms.exe. This will prompt the installation of the monogram frames. The Monogram Frames dialog box will appear – read the prompt and click OK to continue. The next box will ask you to unzip these files – click Unzip to continue. Then, after they are installed, click OK in the next dialog box (40 files unzipped successfully) – close the self-extractor.

Plug in the blue dongle – start Generations and then install the key file (emailed to you with instructions).
